

WaterSentinel®

AF-1 & RE-1

REFRIGERATOR AIR FILTER

AF-1 REMOVES ODORS IN YOUR REFRIGERATOR

The AF-1 refrigerator air filter uses carbon to absorb odors from your refrigerator or freezer. Why let odors from fish, leftovers, chopped onion or garlic taint your fresh food?

AF-1 air filters help eliminate these and other odors by capturing them in its carbon filter element. The included peel and stick foam tape makes it easy to attach the unit to any inside wall of your refrigerator. Side walls work best, midway between the door and back wall. Then make it a point to change your refrigerator air filter when you change your refrigerator water filter. This WaterSentinel® air filter can be used in any make or model refrigerator or freezer.

RE-1 REPLACEMENT ELEMENTS FOR THE AF-1

Replacing the filter element is easy. Locate the tabs on the front face of the filter body. Gently pull the front half of the filter body away from the back half (the back half should remain attached to the refrigerator wall). Push the old foam element out and discard. Insert the new foam and reattach the front to the back of the filter body. Press the unit firmly in place. Change the filter element every three to six months as needed.

SPECIFICATIONS:

Dimensions:	3" x 4.5" (7.62 cm x 11.43 cm)
Service Life:	6 months

Manufactured by: Aquamor, LLC. Temecula, CA.
